Full-stack developer MCA Graduate with hands-on experience building REST APIs, backend services, and AI-integrated systems using FastAPI, Flask, and Spring Boot. Proven track record of independently delivering full-stack applications end-to-end across MySQL, MongoDB, and PostgreSQL. Seeking a Backend Development Intern role to contribute to production-grade scalable systems.

Education

Bangalore Institute of Technology

Master of Computer Applications (MCA)

CGPA: 8.84 / 10 (upto Semester III)

Bengaluru, Karnataka

2024 – June 2026

VET First Grade College

Bachelor of Computer Applications (BCA)

CGPA: 8.83 / 10

Bengaluru, Karnataka

2021 – 2024

Technical Skills

Languages: Python, Java, C, JavaScript

Backend: FastAPI, Flask, REST APIs, Spring Boot, Node.js, Express.js, NestJS

Databases: MySQL, PostgreSQL, MongoDB

Authentication & Security: JWT, REST API security, role-based access control

Frontend: React.js, Tailwind CSS, HTML5, CSS3

Tools & DevOps: Git, GitHub, Docker

AI & ML: Pandas, NumPy, Scikit-Learn, TensorFlow, Google Gemini API, Groq API

Projects

NeuroSymbolic AI Brain Tumor Diagnosis System [GitHub]

Python, FastAPI, TensorFlow, CNN, MongoDB

- Trained a CNN model using TensorFlow for brain tumor classification (glioma, meningioma, pituitary) from MRI scans, achieving 93% accuracy on a held-out test set of 1,311 images, verified via scikit-learn's classification report.
- Built a FastAPI backend with async REST endpoints and Swagger/OpenAPI documentation, with MongoDB integration for storing prediction results; prototyped a rule-based validation layer to flag anatomically implausible predictions.

IPL Analytics & Auction Intelligence System [GitHub]

Python, Flask, MySQL, Scikit-learn, Power BI, Groq API

- Engineered an IPL analytics platform analyzing 1,090 matches and 260,000+ ball-by-ball records, implementing 8 business-insight SQL queries, a Random Forest match predictor, and interactive Chart.js dashboards.
- Built an AI Auction Intelligence engine using Text-to-SQL - LLaMA 3.3-70b via Groq API converts natural language franchise queries into MySQL queries, returning actionable player retention and bidding recommendations.

HiredLens [GitHub]

NestJS, React, TypeScript, PostgreSQL, Prisma ORM, Google Gemini API, Docker

- Integrated Google Gemini API to build a semantic resume optimization engine generating personalized 90-day learning roadmaps and high-fidelity PDF/LaTeX exports.
- Engineered a real-time technical interview platform with Monaco-based Coding Arena and AI interviewer; deployed full-stack NestJS/React monorepo on Render.

Experience

CampusPe

Full Stack Development Intern (Java)

Remote

Feb 2026 – May 2026

- Sole developer of the DPDP Act Consent Audit Trail - a Full-Stack compliance platform with React frontend, Python Flask + AI backend, and Java Spring Boot + MySQL; independently delivered all three tiers when team members were unavailable, originally scoped as a 5-person project.
- Designed Spring Boot backend including database schema, JWT-secured REST API endpoints, and MySQL connectivity; additionally built a MERN stack Task Management app with full CRUD, demonstrating adaptability across Java and JavaScript ecosystems.

AISECT Pvt.Ltd

Data Science / ML Intern

Bengaluru

Nov 2023 – Mar 2024

- Built data preprocessing pipelines in Python using Pandas and NumPy; developed interactive visualizations with Matplotlib and Seaborn integrated into web dashboards to surface business insights, demonstrating practical backend data integration experience.
- Evaluated and reported model performance metrics across classification tasks; wrote clean, well-documented Python code following software development best practices to improve ML model input quality and training consistency.

Certifications

Cloud Computing Fundamentals - IBM

Introduction to Cybersecurity - Cisco

Programming Using Python - Infosys Springboard
